Education

City, University of London | Aeronautical Engineering (MEng) | Grade: First Class Honours

Oct 2014 - Jul 2018

St Gregory's RC Science College | A Level's: Physics (A), Maths (B), Further Maths (B)

Sep 2007 – Jul 2014

Certifications

✳ SnowPro Core Certification

Mar 2026 - Mar 2028

✳ Claude Certified Architect - Foundations

Jul 2026 - Jul 2027

📖 Databricks Data Engineer Associate

Jul 2026 - Jul 2028

Skills

	Google Cloud	BigQuery, GCS, Compute Engine, Cloud Run, Pub/Sub, Artifact Registry
	Azure Cloud	Azure DevOps, Blob Storage, Entra ID, Event Grid, Storage Queue
	Data	SQL (dbt, BigQuery, Snowflake), Python(uv), Streamlit
	DevOps	Docker, Git, Terraform, Claude, Linux, CLI/Shell(bash)

Work Experience

VIVANTI  sky easyJet 

Vivanti - Consultant

Feb 2026 - Present

- Lead the design of Azure DevOps CI/CD pipelines for dbt and terraform, coordinating team for system integrations.
- Built Terraform codebase from scratch to provision Snowflake resources and defining conventions for infrastructure change.
- Secured Snowflake with a hierarchical RBAC solution which segments privileges on various warehouse objects.
- Created data loading pipeline using Azure Event Grid to stream files from Blob Storage to Snowflake via Snowpipe.
- Constructed dbt artifact pipeline to blob for CI/CD pipeline, saving hours of time on CI testing by using state-aware dbt builds.
- Roadmap created to highlight and resolve source data issues surfaced through dbt pipeline and data quality framework.
- Conducted sessions with analysts/engineers to create confidence in navigating Terraform and dbt infrastructure.
- Created internal roster optimisation tool with Snowflake, Streamlit and Google OR-tools to automatically allocate consultants to future engagements based on skills matching and availability to save several hours per-week on roster planning.

Fifty Five - Senior Data Engineer

Sep 2024 - Mar 2025

- Built Python API ingestion pipeline for Google search trends and weather data into GCS and BigQuery to support ML pipeline.
- Implemented an ELT process with BigQuery and dbt to analyse hospitality loyalty figures, tracking booking-to-stay conversion rates across hotel locations.
- Audited client's BigQuery project with 300+ tables, cleaned up abandoned pipelines, significantly reducing table count and improving maintainability.
- Patched problematic GA4 transformation pipeline for client by utilising Pub/Sub messaging system to trigger pipeline based on source freshness timestamps.
- Resolved dbt DAG failures caused by unexpected data source changes, troubleshooting Airflow and BigQuery, communicating resolutions to clients, and restoring sales analytics.
- Incorporated a CI/CD Terraform (IaC) workflow which updates GCP infrastructure and pipelines.

Sky - Data Visualisation Engineer

Dec 2022 - Sep 2024

- Developed BigQuery data models to visualise analytics on: customers behaviour, subscription and order flows.
- Monitored customers with broadband speed issues via Tableau, and evaluating effectiveness of churn mitigation strategies.
- Analysed broadband discount offering with Tableau and measured the uplift in customer acquisition conversions after receipt of discounts.
- Legacy SQL migration from on-prem to BigQuery warehouse and performed regression testing to assure effective transition.
- Implemented common staging pipelines, resulting in a significant reduction of duplicate data processing and divergent truths.

easyJet - Safety Data Analyst

Nov 2021 - Nov 2022

- Collaborated with safety experts to develop Tableau dashboards tracking incident statistics across Flight, Engineering, Cabin, and Ground Operations, improving visibility of safety risks.
- Automated manual reports with Python (pandas, matplotlib, xlsxwriter) by creating burst-reporting pipelines and saving 30 man-hours per month.

TUI Airways - Engineering Safety Analyst

Aug 2018 - Sep 2021

- Chaired the monthly Engineering Safety Action Group (ESAG), presenting safety trend analyses and ensuring senior management addressed risks to airworthiness and operational readiness.
- Creating Python scripts (pandas, matplotlib) for analysing trending safety incidents across Engineering & Maintenance (E&M).
